Experiment 2: Design a User Interface Prototype for a Mobile Bus Booking System Using Figma

1. Aim

To design a user interface prototype for a mobile bus booking application using Figma, focusing on connectivity, convenience, and a user-friendly experience for passengers.

2. Software Used

- Figma: For UI/UX design, wireframing, prototyping, and interactive screen linking.
- Web browser: To access Figma and preview the prototype.
- Internet connection: To access the design tool and test interactive prototype navigation.

3. Algorithm

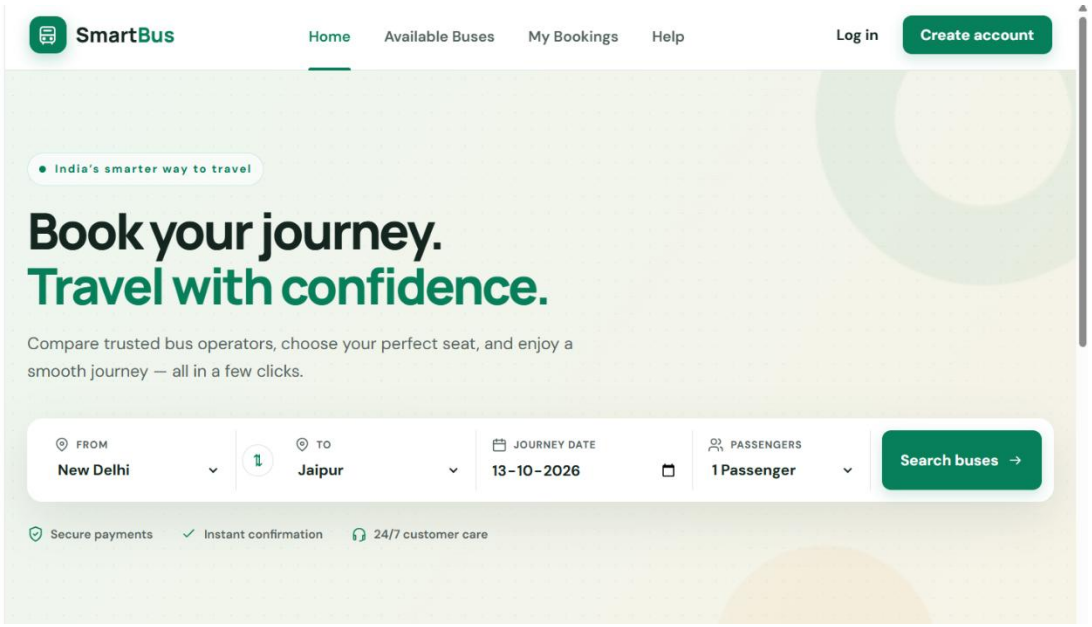

1. Start.
2. Identify the requirements of the mobile bus booking application.
3. Create a new design project in Figma.
4. Design the login and registration screen.
5. Design the home screen with source, destination, travel date, and passenger details.
6. Create the bus search results screen with filters, prices, and bus timings.
7. Design the seat selection screen.
8. Create the passenger details and payment screens.
9. Design the booking confirmation screen with ticket information.
10. Connect all screens using Figma's Prototype mode.
11. Test the navigation flow and usability.
12. Save and present the final prototype.
13. Stop.

4. Design

The application consists of the following screens, based on the provided reference image.

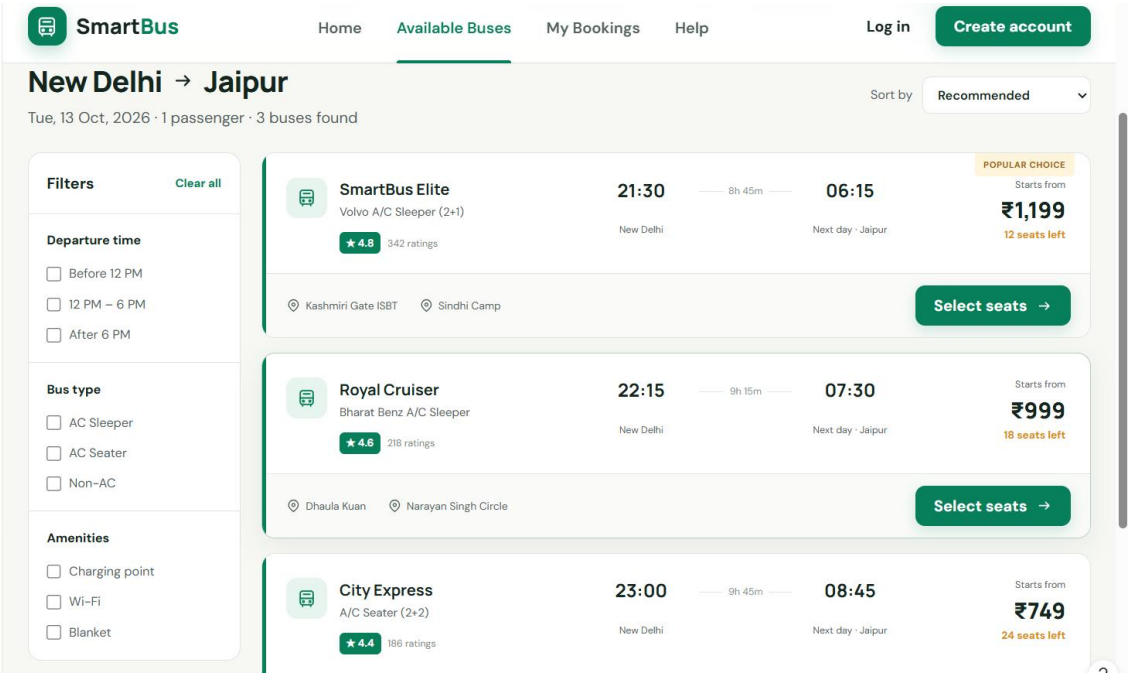

Screen 1: Login and Registration

Provides email and password fields, Google sign-in, and account creation options.

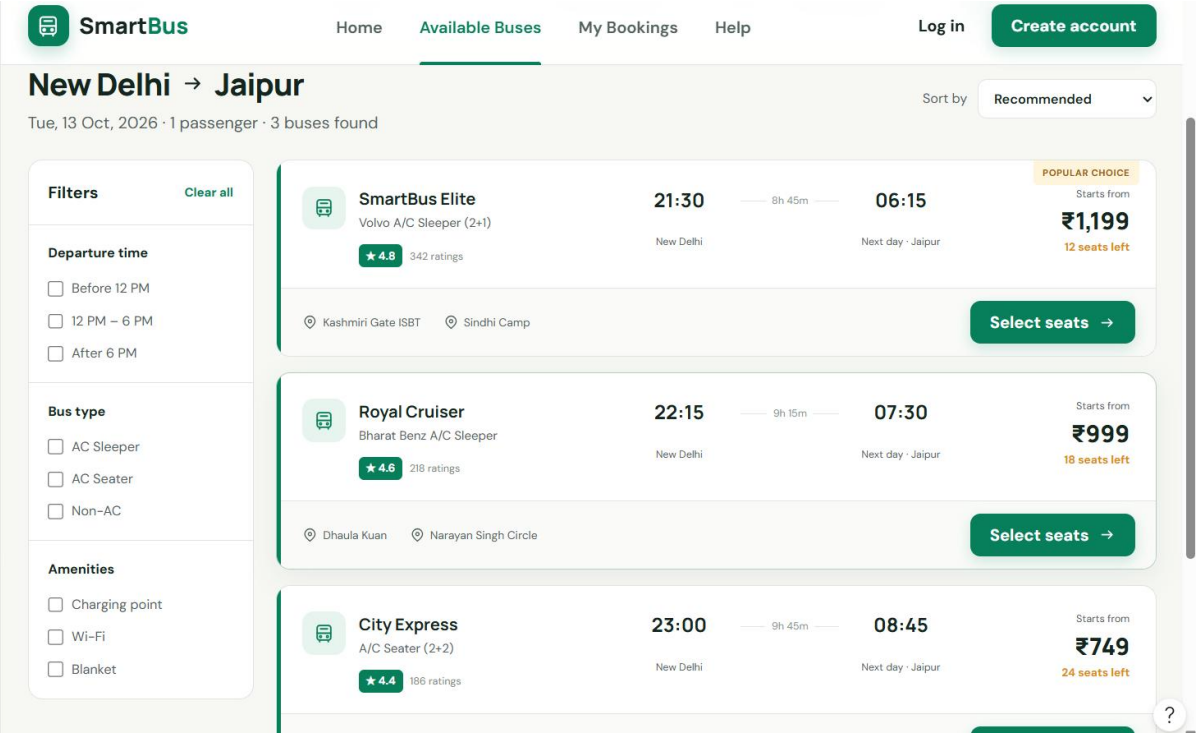

Screen 2: Home and Bus Search

Allows users to enter their departure city, destination, journey date, and number of passengers.

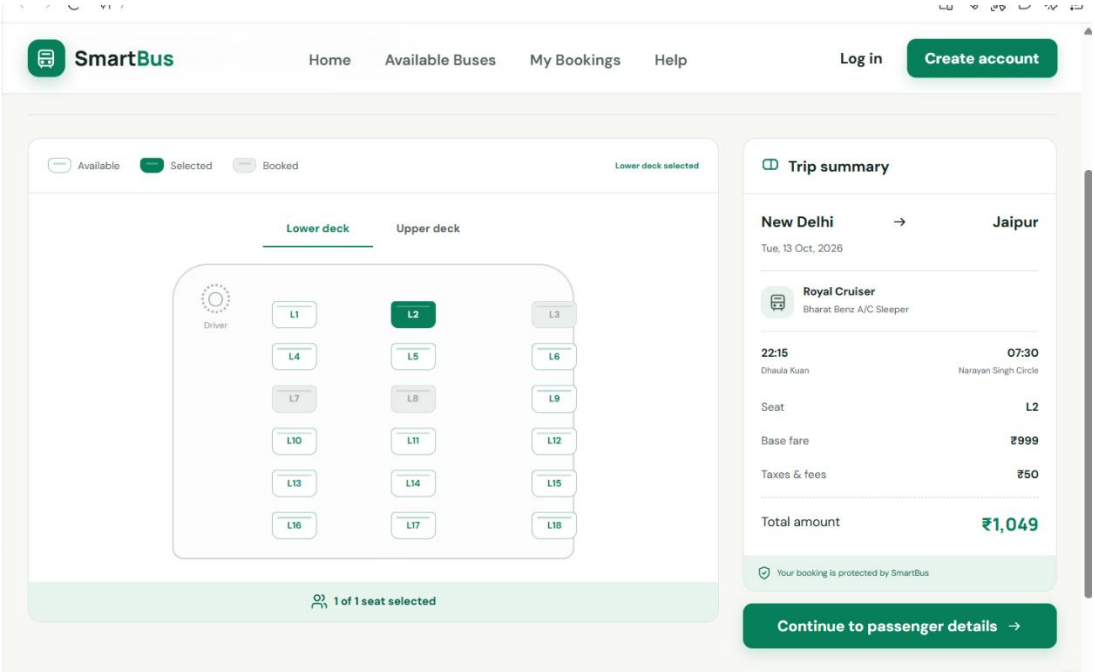

Screen 3: Bus Selection

Displays available buses, departure and arrival times, ticket prices, ratings, and filtering options.

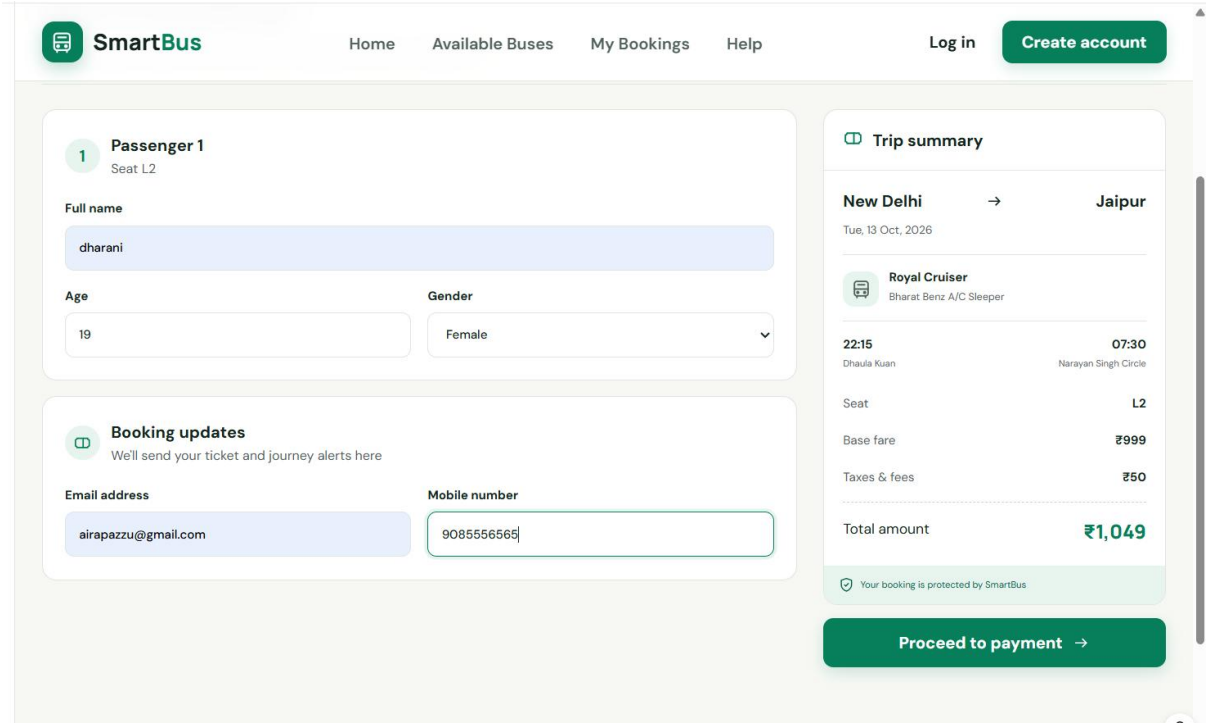

Screen 4: Seat Selection

Shows available and booked seats and allows passengers to select their preferred seats.

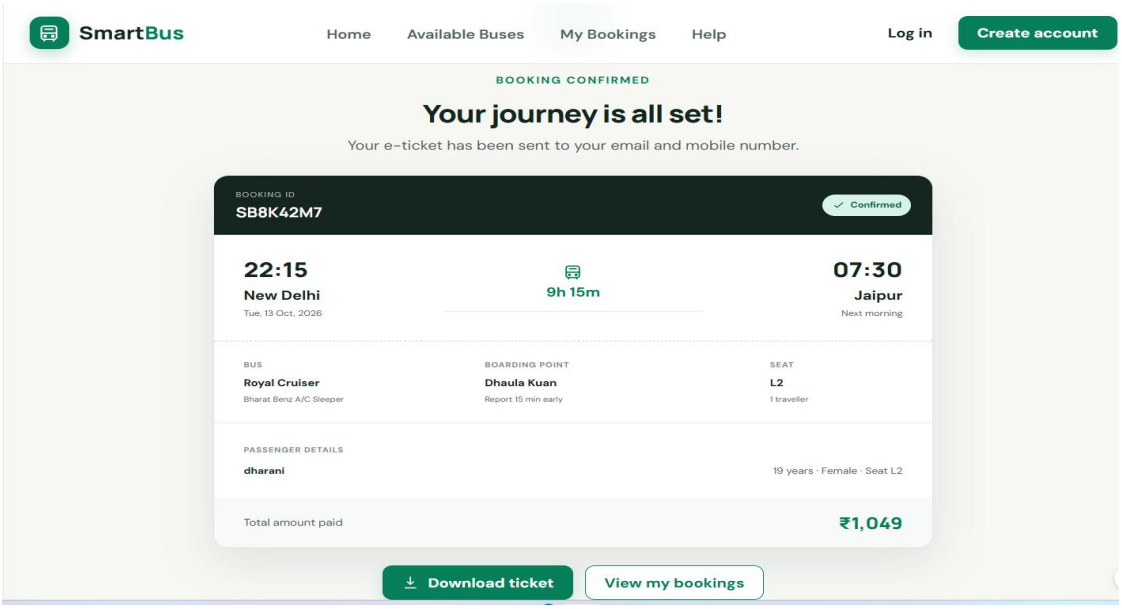

Screen 5: Passenger Details and Payment

Collects passenger information and displays the fare summary before payment.

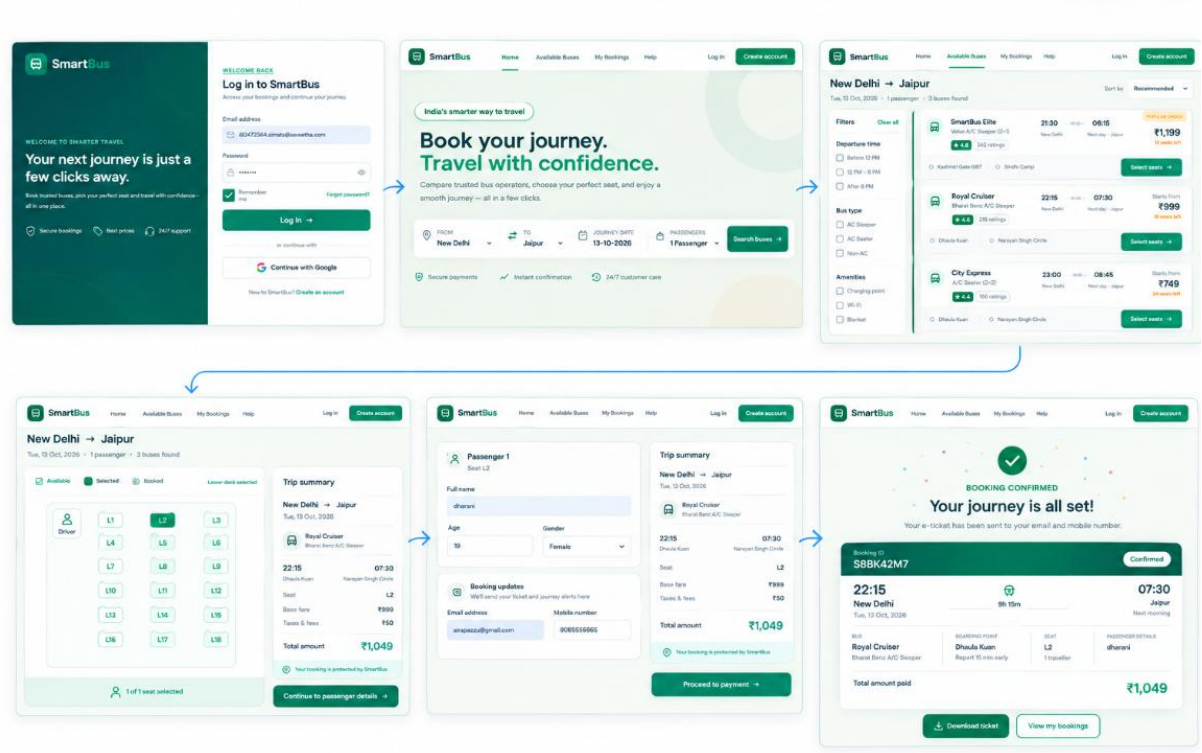

Screen 6: Booking Confirmation

Displays the booking ID, journey details, selected seat, total fare, and ticket download option.

5. Prototype

6. Result

The user interface prototype for a mobile bus booking system was designed using Figma. The prototype demonstrates the complete booking flow, from login and bus search to seat selection, payment, and booking confirmation. It provides a simple, convenient, and user-friendly interface for passengers.
